The 2010 Census, Redistricting and High Stakes

Since 1790, the United States census has been conducted every 10 years. The results reflect changes in population that are used to configure congressional and legislative district lines, a process known as redistricting. Often an exercise in raw political deal making, redistricting in 2011 might dictate the politics of states and the Congress for the next decade. In this lively session, you will hear about the census data being used, the legislative bodies who will use it and the philosophy behind its use.

The current state and local fiscal recession is unprecedented, both in its severity and its length. Adding to these woes, state pension shortfalls, deferred infrastructure investment and other long-term budget pressures equate to an era of "doing more with less." State leaders will discuss their efforts to improve government efficiency and effectiveness, and will share their lessons on what works—and what doesn't.

SPEAKERS: Michael G. Caudell-Feagan, *Deputy Director, Pew Center on the States*

Representative Jerry Madden (*TX*)
